**Programa principal**

Funciones

(C)

Write: "CALCULAR PERIMETRO DE RECTANGULO"
Write: "Ingrese la base: "
b = getNumPositivo()
Write: "Ingrese la altura: "
h = getNumPositivo()
Write: "Base: " b " // Altura: " h
Write: "El perimetro es: " getPerimetro(b,h)

(F)

getNumPositivo
Read: num

num < 0

TRUE   FALSE

num = num*(-1)

return num

getPerimetro
base, altura
perim = 2*(base+altura)

return perim
